Incident Postmortem: Checkout Outage. On August 14, 2026 the checkout service was unavailable for 47 minutes, affecting roughly 12 percent of daily orders.

Root cause. An expired TLS certificate on the internal payments proxy caused all payment authorization calls to fail. The automated renewal job had been failing silently since July because of a revoked service account token.

Action items. Add certificate expiry alerts that fire 21 days before expiry; the owner is Dev Patel and the due date is October 1. Add alerting on renewal job failures.
